

Virtual Visits Now Available

Stay Connected With Your Doctor: Schedule a Virtual Visit Today

In an effort to keep our community safe and protected, we will be postponing all adult non-essential well-visits and annual check-ups effective immediately.

Our pediatricians will continue to see well-visits for newborns, infants and children ages 2 years and under, and also continue to schedule essential vaccination visits. Well-visits for children older than 2 years will be postponed.

We look forward to rescheduling with you at a future date.

In the meantime, we realize some health needs can't wait and we are now offering virtual doctor's visits via telehealth. The virtual visit is easy – you can connect through your iPhone or a computer with a camera. The consultation will take about 15-30 minutes and your physician will be able to make a diagnosis, recommend treatment, and send prescriptions to your pharmacy just like they would during a normal office visit.

You can schedule a virtual appointment by contacting our office. You will be given an appointment time and instructions on how to access your session. While many issues that you have may lend themselves to a telehealth visit, some may still require an in-office evaluation. Your provider can make that determination during your virtual visit.

Contact your doctor to determine if a virtual visit is appropriate for you. Call (914) 723-8100.
